Woodhouse. 1624.

An Almanacke, and Prognostication, for the yeare of our Lord God, 1621.

Being the first after the Bissextile or Leape yeare.

Contayning sundry rules, notes, and directions very necessary for most sorts of men, serving indifferently for all this kingdome of great Brittaine.

But more specially for the ancient Citie of Chichester and the Southerne parts.

By *Iohn Woodhouse* Philomath.

THe firſt day after euery of the feaſts ſet downe for euery Terme, the court of the Arches is kept in the forenoone in Bowe church, and the Admirall Court the ſame day in the after-noone in Southwarke. The ſecond day after euery of the ſaid feaſts, the Audience Court is holden in the Conſiſtorie in Paules in the fore-noone, and the Prerogatiue Court in the ſame place in the after-noone. The third day following euery of theſe feaſts the Biſhop of London his Conſiſtorie Court is kept in Paules in the fore-noone, and his Maieſties Court of Delegates, in the ſame place in the after-noone. The fourth day after the foreſaid feaſts his Maieſties Court of High Commiſſion is kept in the Conſiſtorie in Paules, or (as it hath beene of late) euerie weeke in the Terme time on the Thurſeday after noone at Lambeth, but if any of the dayes before recited be Sunday, or any Holiday, then is ſuch Court holden the day following. Note, that in Hillario Terme, foure of the aboue-named Court dayes bee ordinarily kept, and as many in Eaſter and Trinity Termes, according to the courſe of the yeare; and as the Iudge of the Arches ſhall thinke good, who at the end of euery Terme, appoynteth the Court-dayes to be kept the next Terme. But in Michaelmaſſe Terme the Court dayes for the ſame before ſet downe are certainely kept. I therefore doe admoniſh all Countrymen (but eſpecially thoſe that dwell farre off) cited by any originall Proceſſe to appeare in the Audience, Prerogatiue or Delegates, to ſend to ſome Proctor a note of the cauſe, and to what Court they be cited to appeare for them, and to returne them word of the very day it ſhall be needefull for them to appeare in perſon. But the courſe of practiſe in the High commiſſion and Admirall Court, is

otherwiſe,

otherwise, for every person cited to those Courts must appeare personally.

Generall rules of Husbandrie, Gardening and Physicke.

GRaft, and plant trees, the Moone being in Taurus, Virgo, and Capricornus the fit time of the yeare considered, in the new of the Moone; the wind at South or West.

Remoue and set young trees, from October till Februarie, in the first quarter of the Moone, the weather being

being warme and drie, and the winde neither North nor East: ſet or ſowe all kinds of ſeeds, the Moone in Aries, Taurus, Cancer, Virgo, Libra, Capricorne, Aquarius, or Piſces: but the ſeedes whoſe rootes be round, muſt be ſowne or ſet three or foure dayes before or after the full.

Cut and plaſh hedges betweene the Change and the Full, from the end of January vntill the beginning of June.

Cut Vines in Januarie and Februarie.

Sheare ſheepe, cut haires, and ſowe all manner of corne in the increaſe of the Moone.

Geld cattell, the Moone in Aries, Libra, and Sagittarius before the full; it mattereth not when you let them bloud, ſo that the ſigne be not in the heart, nor in the place where the inciſion is made, nor in the day of the change of the Moone.

It is good to ſet all kind of Quick ſets from September, till March.

Dung land, that weeds may not abound, in the laſt quarter.

Purge, when the Moone is in Cancer, Scorpio, or Piſces, and after the full.

The beſt times to let bloud, be for the { Sanguine, Cholericke, Melancholike, Phlegmaticke } the moone being in { Piſces, Cancer, Scorpio, or Piſces, Aries, Sagittarius, or Aquarius. }

A neceſſarie obſeruation for ſowing of Garden Seeds.

ALl Pot-hearbes muſt be ſowne thicke, and but thinnely couered, not aboue three fingers. All hearbes with Cabbage muſt be ſowne thicke, and couered an handfull deepe, and in their remouing

planted thin, and wel fixed into the earth. All rootes must be sowne thinne and deepe, either set into the ground, or strewed in deepe furrowes, digged and laid vp for the purpose, after the quantitie of your seede. If you sowe hardly an handfull, then may you set them one by one into the ground. But if you sowe a great quantitie, turne vp your earth into deepe furrowes, and in the bottome thereof scatter your seede, and then take it into a leuell, and you shall not onelie saue much labour, but reape greater profit.

Of gathering and preseruing of fruits.

CHerries of all fruits (for the most part) be soonest ripe, but not all at one instant: The reddest be alwayes the ripest, and must bee gathered by the stalkes, and handled as little as may be. Lay them as thinne as you can, lest by taking heate, they soone lose the glorie of their colour.

Plumbs (when no part of the fruit cleaues to the stone) be perfectly ripe: Gather them before they fall downe of themselues: They will be preserued long, being spread thin vpon Nettles, or Vine leaues.

Peares must be gathered when they haue their full growth, which is, when the kernells be hollow in the fore, and are blacke on the end. To haue them last the longer, lay them one by another vppon a boarded floore, or sleabe made of wands, without strawe or ferne.

Wardens will last longest, being laied vpon drie boards, without any couering.

Apples (being drie gathered, and in the olde of the Moone) will be kept best, if euery sort be layd by it selfe (without any fallings among them) vppon bare boards, or a plaister floore, till Saint Andrews tide, the thinner they lie, the better: The place must be some-

ſomewhat cloſe, but not on the ground. In froſt couer them thicke with fine hay, or barle chaffe.

Naturall coniectures of faire weather.

When the Sunne riſeth cleare, and not red, and is red at his ſetting. When the Moone at her prime (which is three dayes and eight houres after the change) appeares faire, and bright. When miſtes come downe from the hilles, and ſettle in the vallies. When miſt riſeth vp in the euening from the water. Crowes and Rauens gaping againſt the Sunne. If Flies and Gnats houer together about the beames of the Sunne before it ſet, making as it were the forme of a piller. If the North winde blowe ſtrong. If the Owle do whoop much, and not ſcritch. If Bats flie buſily after Sun-ſetting. If Cranes flie high, and water-foules lie farre off from the water. All thoſe are certaine ſignes of faire weather.

Signes of raine and foule weather.

If the Sunne at his riſing be fierie red. If a little after hee is vp, hee be couered with great thicke cloudes. If at his ſetting he be ouercaſt with a thicke miſt, or goe downe behinde a great cloude. If the hornes of the new Moone be blunt. If blackiſh ſpotts appeare in the middeſt of her. If two raine-bowes be ſeene together. When bels are heard farther then vſual. When wainſcot doores, and woodden couerings open ſtraiter then of cuſtome. If Swine and Peacockes make a great noiſe. When birds be buſie in waſhing and pruning themſelues, crying and making a great noiſe about the water. The continuall and timely crying of the Crowes. Moles heaping buſily. Cattell eating greedily, licking their hooſes, and breathing into the ayre. When Bees flie not far from

their

their hiues. When Cockes doe crow, by night, more tunely then they were wont. If the Sea doe swell, and flowe higher then ordinary. The chirping of Sparrowes earely in the morning. The blustering noise of trees and leaues in the woods. If in the beginning of winter small birds doe flocke together in the fields. If the winde blow hard in the South, and presently change into the North, it is a token of a very great tempest vpon the Sea shortly after.

Obseruations of Husbandry and Gardening in euery moneth of the yeare, with the course of the fiue Planets.

Ianuarie.

In this moneth, in milde weather, and the winde neither North nor East, set, or sowe kernels and berries of all fruits. Bay trees, Priuet and Box. Remoue trees, set Pease, and Beanes, tidde fruit trees of superfluous braunches, loppe trees, and hedges. Drench and geld cattell for reare, fallow land for wheate and rie. The best time to set, sowe, remoue, prune, or loppe, is before the full. But sowe Pease and Beans, and fell great timber in the last quarter. Beware of physicke and bloudletting chiefly. Weare warme cloathes, eate warme meates. Now spiced drinkes and wines are highly commended.

March.

In the new of the Moone (the winde any part ſouth or weſt, and the weather calme) graft any kind of good fruit, ſet quicke-ſets and willowes. Cut hedges and vines, if the weather in Februarie proue too extreme. Couer with ranke earth the rootes of trees, which you bared in December: and if they be ouergrowne with moſſe, dung them with ſwines dung. In the old of the Moone, ſowe or ſet peaſe, beans, onions, parſenips, cucumbers, and all kind of potherbs. Slit Artichocks and ſage. Geld Lambs, ſowe Oats, and barly in cold land. Now is the beſt time to remoue the roots of diſeaſes, and to preuent their further ſtealth.
